POLYMERSERVICE LTD

THE MARKET LEADER THAT SETS TRENDS

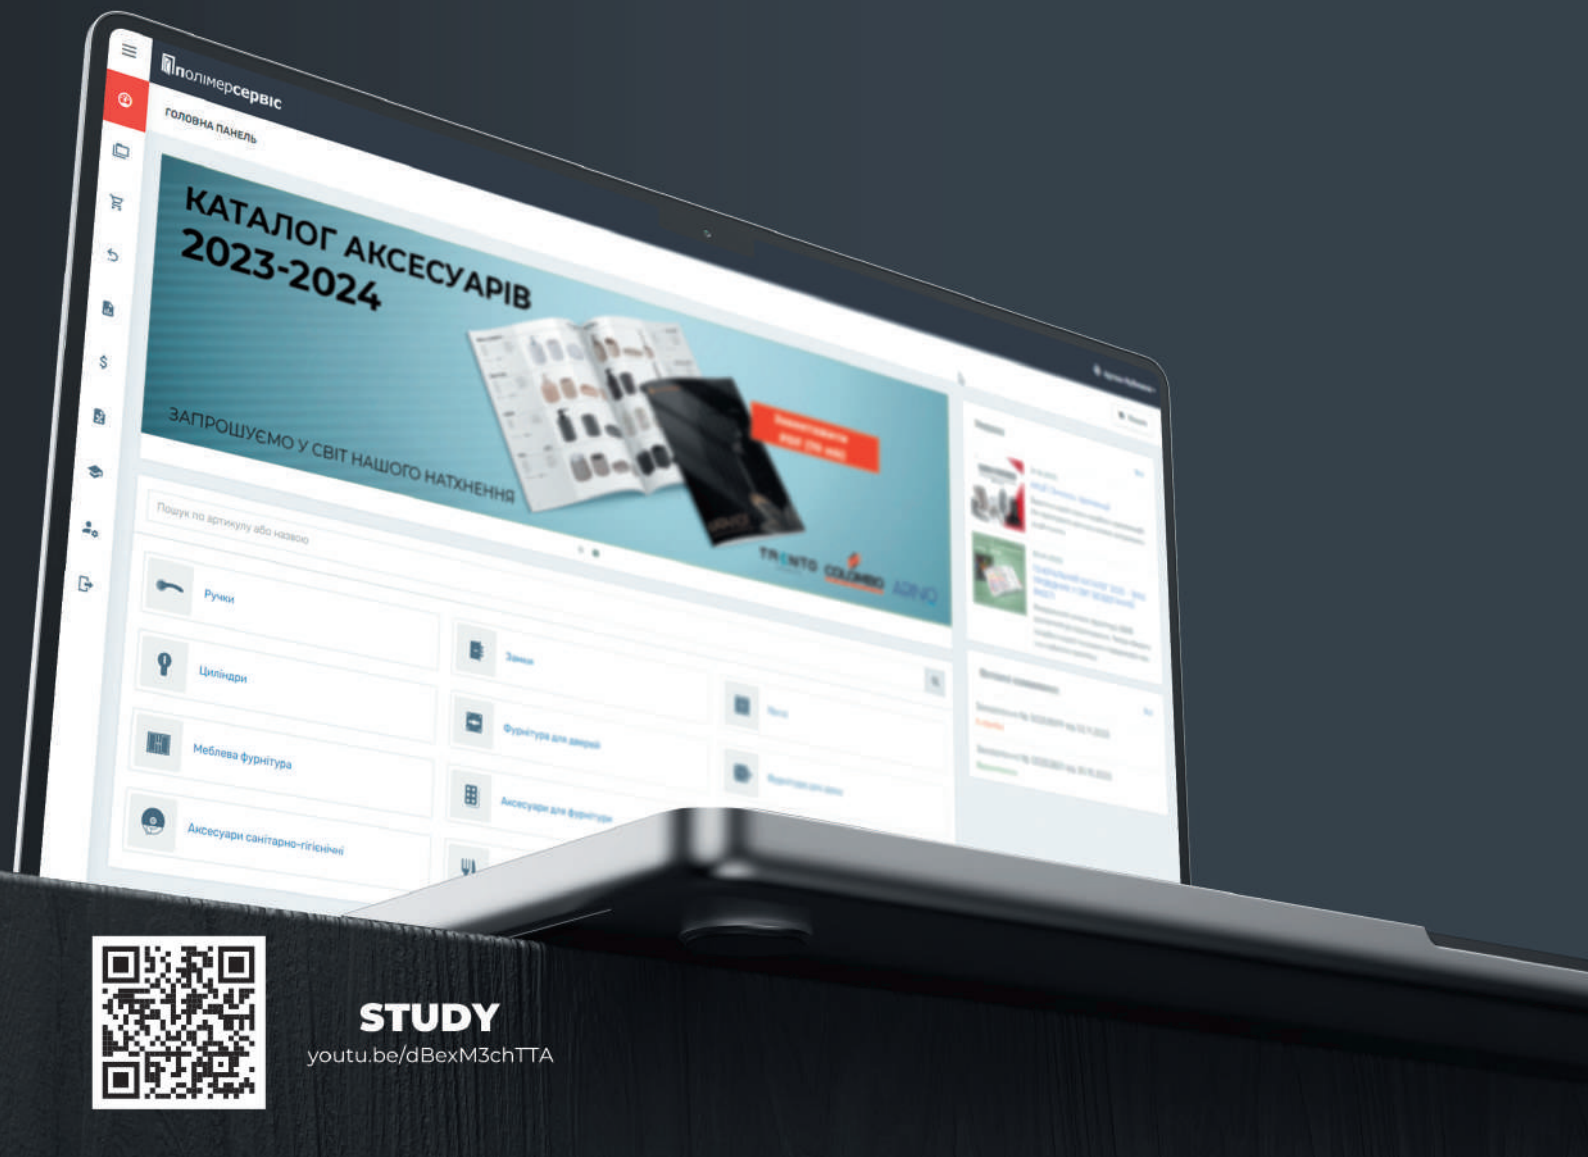
B2B

POLYMERSERVICE

b2b.polyserv.com.ua

With our catalogue you receive::

- Actual balances and orders 24/7
- Information about promotions and new products
- Control of account statements and order statuses
- Photos and product specifications
- Price lists and xml-downloads for your website
- Commercial offers with photos and prices for your customers



STUDY

youtu.be/dBexM3chTTA

GROUP OF COMPANIES POLYMERSERVICE is a company with a history of more than a quarter of a century. We started our journey with the search for high quality and bold experiments, successful business solutions and a carefully selected range of products. After all this time, we are proud to say that we have created a portfolio of strong brands and have not overlooked any technology that has become a trend for decades.

For today, Polymerservice is the largest supplier of door hardware in Ukraine and the market leader in this segment.

OUR MISSION is to bring European quality and innovative technologies to the Ukrainian consumer in the sector of door hardware.

OUR HEAD STRENGTH is our team, where EVERYONE is ready to give maximum effort for the best result.

We work with products of all price segments for entrance and interior doors, more than 60 suppliers from Europe and Asia, specialising in door hardware from Italy, the Czech Republic, Portugal.

Our goal has always been to find the best European door hardware factories whose ideology would be in line with our value system: the pursuit of innovation, high quality, exquisite design and attention to detail, and then to provide these values to the Ukrainian customer.

Our long and hard work has led to the recognition of such Italian and European brands in Ukraine as: **Colombo Design, Fimet, M&T** (door handles), **Securemme, Mottura** (locks for entrance doors and accessories), **AGB** (locks for interior doors and hidden hinges), **Koblenz** (hidden hinges and systems for sliding doors), **Comaglio** (automatic door thresholds), **Villes 2000, Terno Scorrevoli** (systems for sliding doors), **Celegon** (rotary door systems), **Buonelle** (cylinders for entrance doors, door handles) and others.

We exclusively represent products of world-known brands on the market, including: **Colombo Design, M&T, Securemme, Koblenz, Comaglio, Cortellezzi, IBFM, Verum, Fimet, Selegon, Aldeghi Luigi.**

If you are a market leader, you must offer the best prices and quality. That is why today we have products of our own brands in our portfolio: **RDA, Comit, Bruno Lock** - high-quality door fittings with the best recommendations from Ukrainian customers.

Every year, we participate in many specialised exhibitions in Ukraine and attend all the specialised exhibitions in the world. Our employees work every day to promote the company's brands and trademarks, making presentations and sharing their knowledge with representatives of our partners, clearly demonstrating competitive advantages, technical characteristics and benefits.

MODERN WAREHOUSE COMPLEXES

With automated processes, joint planning and our own logistics, we guarantee our customers on-time delivery. And customer centricity, as a commitment to exceeding customer expectations, has become our corporate culture.

We are pleased that once we met on the way to improving the product, we created new opportunities, using high international standards, innovative solutions, as well as the best world experience in integrating the fittings of the best European brands into every home in our daily work.

WE ARE ON THE SAME ROAD AND CHANGE TO WIN!

XNOVA

THE FIRST LOCK “FLEXSECURE”

Years of experience with motorized lock design have led to the dry closure revolution.

With **XNOVA**, it is possible to create complex and reliable systems depending on the customer’s tasks, preferences and budget. And also with the use of special Mottura peripherals, common Mottura spaces, as well as common devices from other manufacturers.

XNOVA is supplied with mains and battery power, with an internal electronic board and dry contact connection.

XNOVA has a special skinplate finish (white galvanized) and is supplied as standard with a reinforced lever for crossbars.

XNOVA can be supplied with a quick unlocking handle. With a single movement from the inside, the door opens even if it is closed all the turns of the lock.
Two types of door position sensor: magnetic or contact, and a two-way burglary interlock system with a patented electronic sensor.

MOTTURA TECHNOLOGY

SOLUTIONS FOR EVERY NEEDS

EVOLUTION IS NECESSARY

Changing habits is not easy, but evolving is necessary. Mottura's new product range makes it easy to adapt our security to the standards of the digital world with systems and interfaces that are easy to install, learn and use.

B-TECHNOLOGY RANGE

The best technologies for comfort and security: Bluetooth, cloud and mobile apps for smartphones and the web (desktop), numeric keypads, fingerprint readers, transponder cards and Bluetooth remote controls. The possibilities for customizing control and security systems are endless.

Security solutions for a **RESIDENTIAL BUILDING**

Security solutions for **OFFICES AND ENTERPRISES**

Security solutions for **PUBLIC PLACES**

Security solutions for **HOTELS AND TRADE**

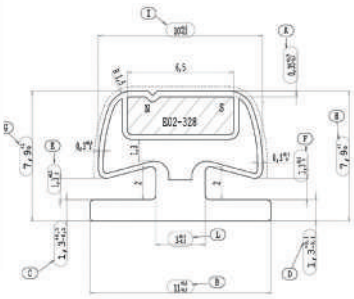
SEALANT COMEO PORTE 14*2100 MM 0113 (WITHOUT MAGNET)

Code	Colour
57597	grey (with tape)
57596	black (with tape)

Characteristics:
Door sealant D-shaped
Dimensions: 14x13,5mm
TEP (thermoplastic elastomer).
With/without adhesive tape: on customer request.
Colour: black, grey, white, brown or according to the customer's standard.
Packaging: cardboard box.
Quantity of whips in 1 pack: 70 pieces for lengths from 1000 mm.
Delivery: standard dimension of 2100 mm in whips (tolerance 0+10 mm). The maximum length of oak is 2300 mm.
Minimum batch: 1000 metres in multiple pack.

Functionality: it has elasticity, tightness and recovery properties similar to foamed vulcanised rubber, but unlike it, it does not cause the door to bounce (which is important primarily for electronic locks).

Material: TEP (Thermoplastic Elastomeric Plastic) is a new elastomeric material that has all the properties of vulcanised rubber, but with higher resistance to aging (10 years according to GOST with all functional characteristics preserved), the ability to be painted in any colour, and is environmentally friendly (recyclable). The operating temperature range is from 60 to +90°C. The material is made in Italy and is certified according to European standards.



SEALANT COMEO PORTE 11*2100 MM 0880 (WITHOUT MAGNET)

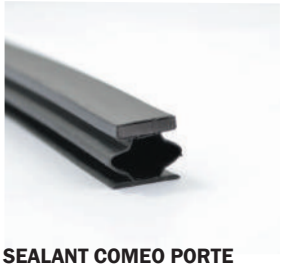
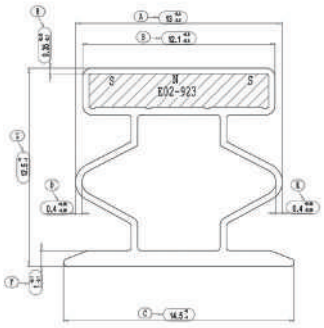
61050	black (with tape)
57594	black (without tape)

Characteristics:
Magnetic door seal
Dimensions: 11x7,9 mm
Material: TEP (thermoplastic elastomer).
With/without adhesive tape: on customer request.
Colour: black, brown.
Packaging: cardboard box.
Quantity of whips in 1 package: 154 pieces.
Delivery: in whips of standard dimension 2100 mm.
Minimum batch: 1 box.

Functionality: unlike non-magnetic seals, our magnetic seal works in both compression and tension (+/- 4 mm), similar to magnetic seals for refrigerators (heat, sound and odour insulation).
Compared to other types of magnetic seals, where the magnetic insert is mechanically fixed, the feature of article 0880 is that the magnetic strip is fixed during the profile extrusion process (encapsulation).

Material: TEP (Thermoplastic Elastomeric Plastic) is a new elastomeric material that has all the properties of vulcanised rubber, but with higher resistance to aging (10 years according to GOST with all functional characteristics preserved), the ability to be painted in any colour, and is environmentally friendly (recyclable). The operating temperature range is from 60 to +90°C. The material is made in Italy and is certified according to European standards.





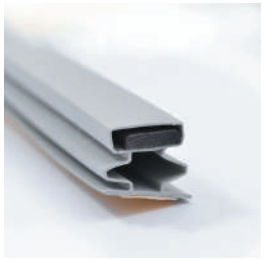
SEALANT COMEO PORTE 14*2100 MM 0924 (WITHOUT MAGNET)

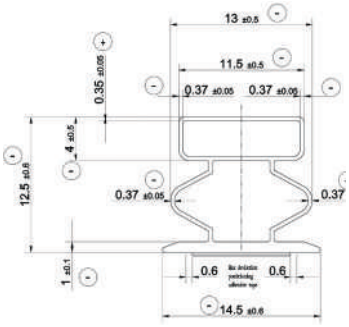
Code	Colour
57593	grey (without tape)

Characteristics:
Magnetic door seal
Dimensions: 14x12,5mm
Material: TEP (thermoplastic elastomer).
With/without adhesive tape: on customer request.
Colour: black, grey, white, brown or according to the customer's standard.
Packaging: cardboard box.
Quantity of whips in 1 pack: 70 pieces for lengths from 1000 mm.
Delivery: standard dimension of 2100 mm in whips (tolerance 0+10 mm). The maximum length of oak is 2300 mm.
Minimum batch: 1000 metres in multiple pack.

Functionality: unlike non-magnetic seals, our magnetic seal works in both compression and tension (+/- 6 mm), similar to magnetic seals for refrigerators (heat, sound and odour insulation).

Material: TEP (Thermoplastic Elastomeric Plastic) is a new elastomeric material that has all the properties of vulcanised rubber, but with higher resistance to aging (10 years according to GOST with all functional characteristics preserved), the ability to be painted in any colour, and is environmentally friendly (recyclable). The operating temperature range is from 60 to +90°C. The material is made in Italy and is certified according to European standards.





SEALANT COMEO PORTE 14,5*2100 MM 1082 (WITHOUT MAGNET)

ARMOUR PLATE DISEC MAGNETIC MR125L-25D1T

Code	Colour
62557	matte chrome

The **MR125** armour cover provides reliable protection of cylinder mechanisms against drilling, knocking out, breaking and other methods of unauthorised opening of cylinder locks. The DISEC MR 125L-250 armour plate can be installed on all European-type cylinders. The main feature of this armour plate, unlike others, is a magnetic rotating anti-vandal cover that completely closes the access to the locking hole of cylinder locks, protecting the cylinder from opening by manipulating the lock pick, drilling the cylinder mechanism, accidental ingress of debris, as well as from deliberate damage to the lock by blocking the lock hole with foreign objects (matches, pins, glue, etc.).
The body of the armour plate is one-piece cast, made of steel with a galvanically hardened coating to a strength of > 62 HRC on the Rockwell scale and, in order to protect the rotor of the cylinder mechanism, a 6 mm thick rotary washer of hardened chrome steel is installed inside the armour plate. The secrecy of the movement is ensured by 3 gyroscopes with 6 magnets.
To achieve maximum resistance to burglary, the armour plate is attached directly to the lock body or door with hardened M-6 screws that pass directly through the lock. The screws have a fracture resistance of 4200 kg. The screws are threaded only to the depth of the armour plate, which prevents breakage in vulnerable areas.
To protect against drilling, hardened balls are installed in the armour plate mounting hole. To open the armour plate, attach a magnetic key fob to the opening of the cover and turn it clockwise 180 degrees, and to close it, turn it in the opposite direction. The DISEC MR-125 armour plates are supplied with 3 keys.
A duplicate magnetic key can be ordered with the card (MAGNETIC KEY).
Due to the high secrecy of the magnetic key, the selection of a code combination is excluded

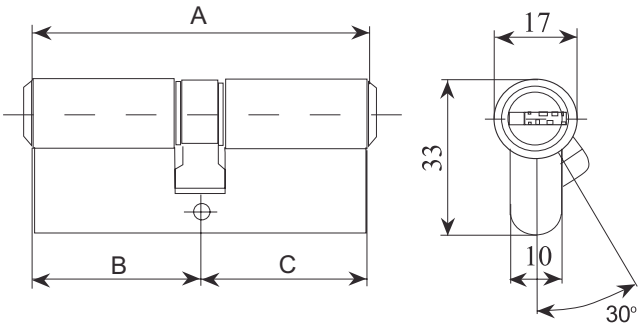
RDA cylinders - used for entrance and interior doors, 6 pins provide a high level of secrecy - more than 150,000 combinations, the second pin is made of hardened steel to protect the drilling fork, the cylinder is additionally equipped with a metal rod, the cylinder body and key are made of brass, providing protection against corrosion. Maximum performance and high level of protection, especially when combined with armour plates.



Protection against dumping

Protection against lock pick manipulation

Protection against drilling

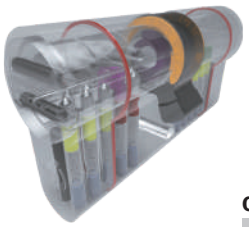
EVO K22



- brass cylinders with a high degree of protection;
- 11 active pins made of hardened steel arranged in 2 rows in checkerboard order;
- pins against drilling out of the foams and drum.
- 1 double pin.

SECRECY:
- more than 2500000 combinations.

SECUREMME ALLOWS YOU TO ASSEMBLE A CYLINDER OF THE RIGHT DIMENSIONS AND PROTECTION CLASS

Securemme modular cylinders are high-quality cylinders made of brass. They can be assembled in any dimension with basic, high and maximum security levels, with 6 (K1) or 11 (K22) active foams, and in the maximum version (K64) with 11 foams + 4 moving elements. The K22 and K64 are equipped with an additional high-strength steel pin that protects the mechanism from being drilled out. Anti-snap function (the outer part of the cylinder is deformed and blocked in case of a burglary attempt); anti-bump function. The set includes 5 keys and 1 mounting key.

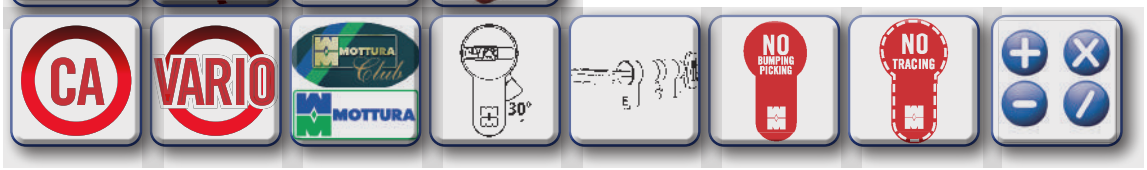
CYLINDER MOTTURA C55

CHAMPIONS C55 PLATINUM

NEW

Secure and controlled production of duplicate keys.

- The CHAMPIONS C55 has two encoding systems: a traditional vertical pin system and a three-rotating pin system with a double desmodromic track, a mathematical pin and a new interactive element that increases security and extends the patent for another 20 years. A special control system for the rotating foams, false grooves on the foams, and a large number of combinations make decoding the cylinder virtually impossible.
- The finish is brushed nickel. Brushed brass on request.
- Cylinder body and rotor are protected against drilling (pins, foams, high-strength plugs).
- The pins and counter pins made of hardened steel are specially shaped to protect against lock picking.
- Side profile control foams block the cylinder in the event of a lock picking or bumping attempt.
- Possibility of manufacturing master systems.
- All cylinders with rotary handle are friction-operated.
- The cylinder is supplied with an owner's card, 5 main keys, a fixing screw, and an instruction manual. The keys are supplied in a hermetically sealed package.
- Cylinders are certified for resistance to bumping and picking and are marked BKC.
- Cylinders are certified for resistance to tampering and are marked TRC.



PROTECTED CONTROLLED DUPLICATES

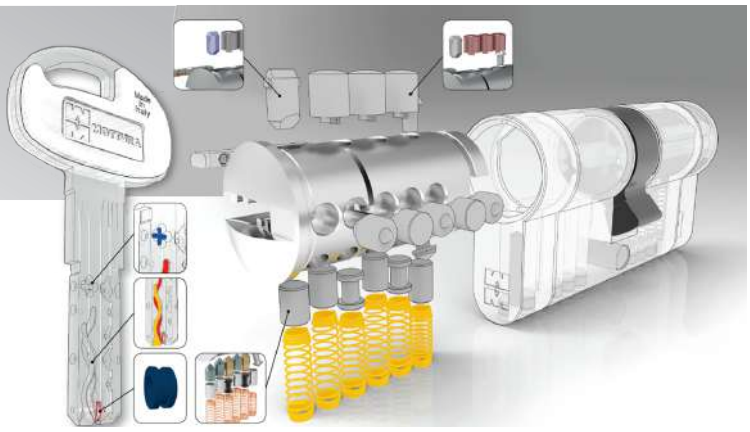
The secure and controlled duplication of CHAMPIONS C55 keys is another criterion of “active” security. The key duplication control mechanism is triggered when a duplicate is requested. The owner's card with the exclusive number must be presented to the Mottura Club centre, from where the card is then sent electronically, via a special Mottura system, directly to the Mottura SERRATURE S.p.A. factory to receive a duplicate. This scheme guarantees maximum control over the production of duplicates. Mottura SERRATURE S.p.a. checks the card's compliance with the cardholder's card, as well as the presence of blockages on the production of duplicates on it, and only then begins production. Mottura SERRATURE S.p.a. has the exclusive right to manufacture duplicate CHAMPIONS C55 keys. The CHAMPIONS C55 key blanks are not freely available. The holder's card is the only document that allows you to request a duplicate. It must be kept in a safe place to prevent illegal duplication. Keys cannot be duplicated without the holder card. It is not possible to obtain a copy of the holder card.

ORDERING A DUPLICATE

1. The customer presents the card and the original key to the Mottura Club centre indicated on the back of the card or to any Mottura Club centre.
2. The centre sends the card to the Mottura S.p.a. factory. where a duplicate is produced and sent to the Mottura Club centre in a hermetically sealed package.
3. The Mottura Club Centre returns the card and packaged duplicate keys to the owner.

Patented MM key profile.

The key is made of nesilber (a strong, durable material), the MM profile is designed to protect against unauthorised duplication. A duplicate key is only available upon request from an authorised Mottura centre. The key has a patented interactive element that interacts with the internal components to provide additional tamper resistance.



Code	Colour	Dimension	Type	Keys
62834	matte nickel	41/51	Key/key	5
62835	matte nickel	46/46	Key/key	5
62836	matte nickel	51/51	Key/key	5
62837	matte nickel	41/51	key/knob	5

62839	matte nickel	51/51	key/knob	5

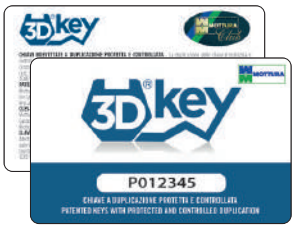
CYLINDER MOTTURA C3D

NEW

Code	Colour	Size	Type	Keys
62439	matte chrome	51/31	key/rod	5
62440	matte chrome	61/31	key/rod	5
62441	chrome		cap	
62442	matte chrome		cap	
62443	black		cap	

- C3D allows you to convert a cylinder lock into a 3Dkey lock without replacing the lock.
- Combines three Mottura security systems: Champions cylinder with rod, Defender protection with integrated 3Dkey system on the outside.
- The key (rod 20 mm) with a hexagonal profile has 3 coded surfaces (9 pins) + 2 desmodromic tracks with rotating, springless pins. False grooves on the pins and a high number of code combinations make cylinder tampering and decoding extremely difficult. At the same time, the key turns smoothly and softly.
- Cylinder body and rotor are protected from drilling.
- Various finishes for the Defender protective cover.
- The package includes a complete cylinder set (with insert, if necessary), owner's card, 5 keys, installation instructions, and a fixing screw. For security reasons, the keys and card are supplied sealed.

FINISHING OPTIONS



The production of duplicate 3Dkey keys is **PROTECTED** and **CONTROLLED.** The holder's numbered card must be physically handed over to the Mottura Club centre, which then sends the card electronically via a special Mottura system directly to the Mottura Serrata S.P.A. factory to receive a duplicate. Obviously, the control over key duplication is maximum. Mottura serrature S.P.A. checks the authenticity of the card, as well as the presence of a duplicate blocking on it, and then produces a 3D key duplicate.
Mottura serrature S.P.A. is the only entity authorised to produce duplicate 3D keys. No 3D key blanks are sold. The holder's card is the only document that allows you to request a duplicate key. It must be kept in a safe place to avoid illegal duplication. Duplicates cannot be made without the holder card. Copies of the holder card are not issued to.

CYLINDER MOTTURA C39

	Name
1	Key with ergonomic head
2	Drill protection pins - protect the key hole
3	Drill pins to protect the cylinder housing
4	Plugs on the coding pins
5	3 profile control pins
6	System with magnetic coding pin
7	Counter coding pins
8	5 coding pins and counter pins made of specially shaped hardened steel with lock pick protection
9	Milling of controlled breakage
10	3 mathematical pins + 2 false pins

- In addition to traditional pin systems, it has a patented magnetic pin that provides protection against opening with an unauthorised key
- Body and rotor have anti-drilling elements (pins, foams and hard material plugs)
- 5 hardened steel pins and counter pins, some of which are specially shaped to provide protection against picklocks
- Specially shaped side and top profile control foams lock the cylinder in the event of bumping or lock picks
- All cylinders with rotary handle are frictionless as standard
- The individual packaging contains: owner's card, 3/5 keys, installation instructions and fixing screw. Keys and owner's card are supplied in a sealed package.
- Cylinders certified to be resistant to bumping and picking are marked with the "BKC" symbol on the packaging.
- Cylinders protected from opening by the tracing method are marked "TRC"

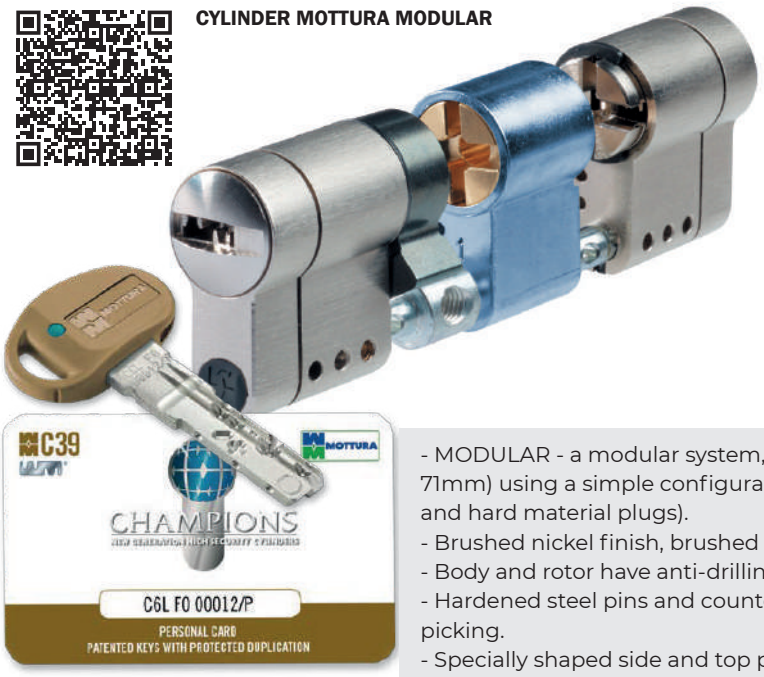
CYLINDER MOTTURA MODULAR



MODULAR duplicates can be produced at authorised centres upon presentation of the owner's card and the original key. The number on the card must match the number on the key itself. The advantage of MODULAR cylinders is that duplicates can be produced quickly at specialised centres - i.e.

- MODULAR - a modular system, ideal for creating a cylinder of any length (from 31-31 to 71-71mm) using a simple configurator - Body and rotor have anti-drilling elements (pins, foams and hard material plugs).
- Brushed nickel finish, brushed brass on request.
- Body and rotor have anti-drilling elements (pins, foams and plugs made of hard materials).
- Hardened steel pins and counter pins are specially shaped to provide protection against picking.
- Specially shaped side and top profile control pins block the cylinder in the event of bumping or picking.
- Tens of millions of code combinations ideal for creating complex master systems.
- Cylinders with a rotary handle are frictionless.
- Each individual pack contains: cylinder, owner card, 3/5 keys, installation instructions and fixing screw. 3 keys and owner's card are supplied in a sealed package.
- Cylinders certified to be resistant to bumping and picking are marked with the 'BKC' symbol on the packaging.
- Cylinders protected against tampering by the tracing method are marked "TRC".

EXAMPLE CONFIGURATION: CYLINDER - KEY/KEY

	Name	Quantity
1	Double cylinder with fixing screw, with 3/5 keys + holder card	1
2	Insert 20 mm for double cylinder	1
3	Cylinder base 30/45	1
4	Cam for double cylinder (cam for double friction cylinder)	1
5	Screw M3x5	4

EXAMPLE CONFIGURATION: CYLINDERS WITH AN ADJUSTABLE HANDLE

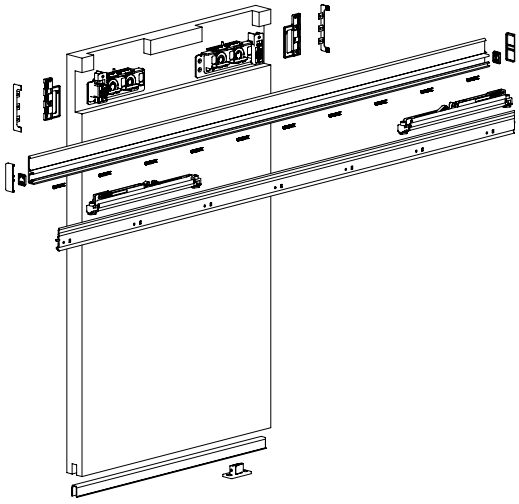
DIVA FLUID

NEW

A new patented sliding system designed for door design, in the form of open aluminium tracks with the new generation Fluid soft-close technology. The assembly process of **DIVA FLUID** has been simplified thanks to a new support clip, a new patented anti-jumping system allows for maximum safety for all installers and end users, avoiding the door from falling in any case.

Width: 600-1500 mm

Weight: 80 kg



Code	Characteristics
61839	Internal support rail up to 80 kg, wall clearance 14-20 mm 6 m, anodised silver
61840	Internal support rail up to 80 kg, wall clearance 14-20 mm 6 m, matt black
61837	External decorative guide up to 80 kg 6 m, anodised silver
61838	External decorative guide up to 80 kg 6 m, matte black
61841	Bottom plastic profile for floor guide 3 m, grey
61842	Diva Fluid 1-door sliding system 80 kg, 2 hydraulic closers, wall clearance 14-20 mm

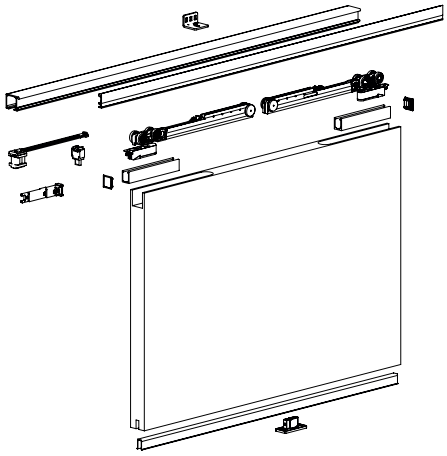
EVOLUTION FLUID

NEW

Invisible and silent sliding system for wooden doors. FLUID EVOLUTION can be installed on doors weighing up to 90 kg. The sliding system is equipped with two built-in door closers, which ensure a smooth door closing/opening action even in cases when you have not calculated the forces.

Width: 650-1600 mm

Weight: 80 kg

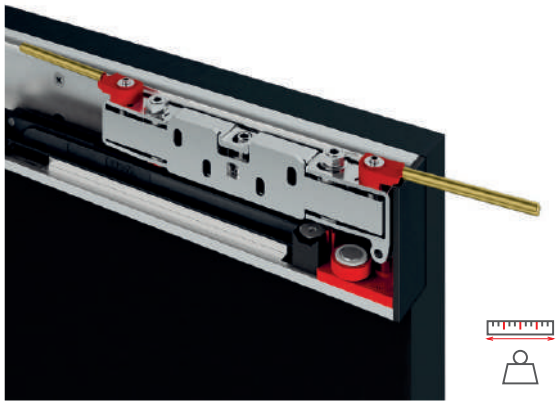


Code	Characteristics
61200	FLUID EVOLUTION 1-door sliding system 80 kg + 2 built-in door closers

MAGIC2

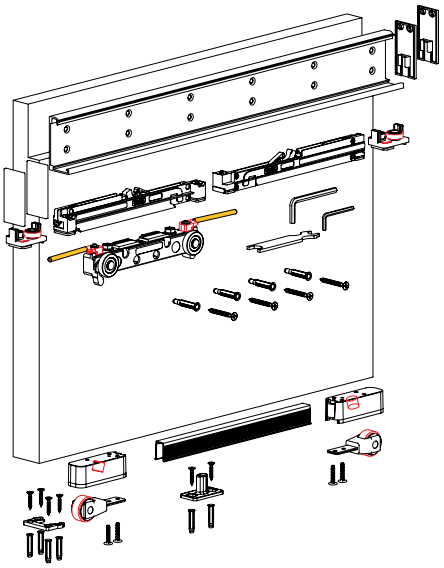
NEW

This is an original invisible system that provides a smooth glide, which has a patent for production. The sliding system is designed for installation on doors 80-110 cm wide and weighing 80 kg.



Width: 800-1100 mm

Weight: 80 kg



Code	Characteristics
58095	Magic2 sliding system for doors 80-110 cm up to 80 kg

SYSTEM KOBLENZ 500

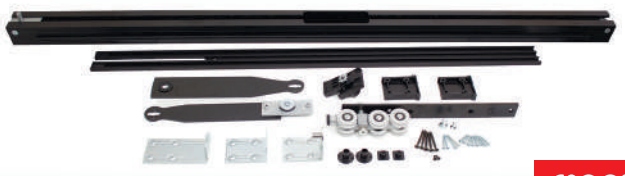
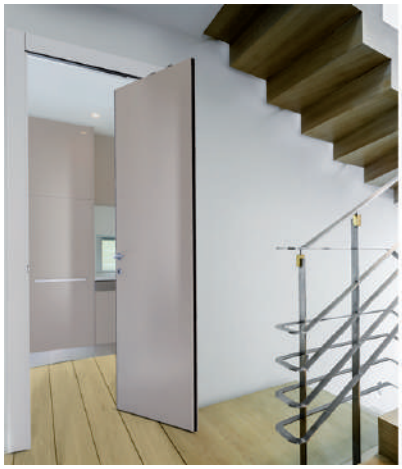
ROTARY SYSTEM ERGON T.E.SLIM



ERGON LIVING

ERGON LIVING is a revolutionary system that saves usable space. There is no need for additional walls, there are no restrictions on the design of doors, as the system is compatible with all types of doors: panel, glazed, solid, metal or plastic.
T.E. SLIM TECHNOLOGY FOR PANEL AND SOLID WOOD DOORS.
The axial pivot rod is recessed inside the sleek door frame without a protruding cassette.



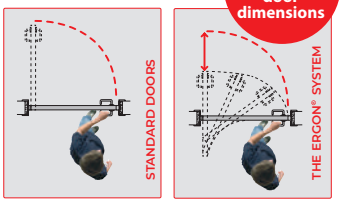
SET FOR SINGLE-SIDED DOORS

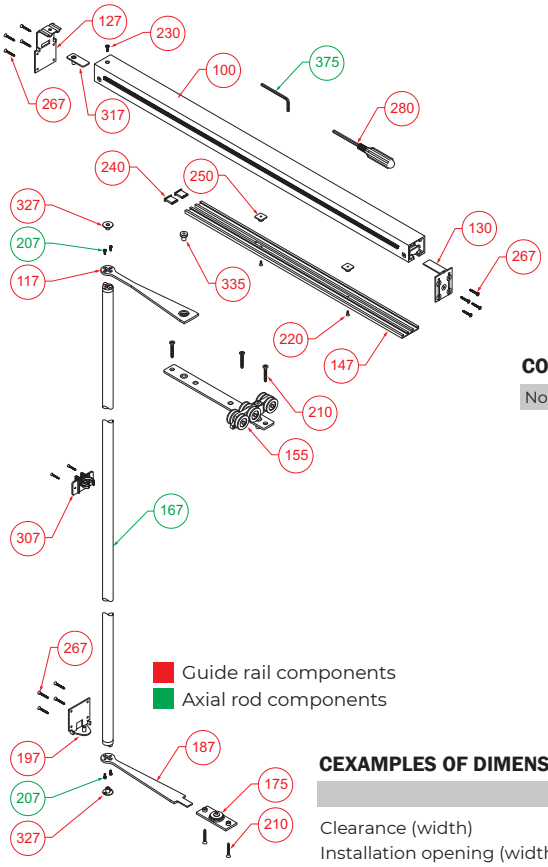
Code	Description
29427	Complete set of the Ergon system H up to 2500, L up to 1100

The Ergon Living T.E. SLIM system has inherited all the qualities of the T.E. version:
- A rod that rotates in the frame
- Doors weighing no more than 70 kg
- Door leaf thickness of at least 35 mm
- Possibility of using a “Soft Opening” door closer
- Available in black and silver colours
- Three lever options with different lengths
- “BASIC”: ideal for LFM (clear doorway) between 800 and 1100 mm
- “SHORT”: ideal for LFM (clear doorway) between 610 and 800 mm
- “LONG”: ideal for LFM (clear doorway) from 1100 to 1450 mm

The difference from the T.E. version is:
- The joining of the stem does not require aluminium fasteners, but is made by small plastic components.
- TE, SLIM system is designed for a frame thickness of 30-40 mm.
- The thickness of the frame is 30 mm.
- The use of a magnetic lock is recommended.

Depending on the specific requirements, the door with the ERGON T.E. Slim rotary system can be installed anywhere in relation to the doorway wall. However, in order to make the description simpler, the following description will be used in two extreme positions.
1) “Central door”, when the leaf is installed in the central part of the frame; this design allows you to install a door with possible two-sided opening. In this case, there is no need to modify the leaf.
2) “Oriented door”, which is located on the same level on one of the two sides of the wall.





Components of the rotor system Ergon Living
For opening in both directions 5.5 mm clearance

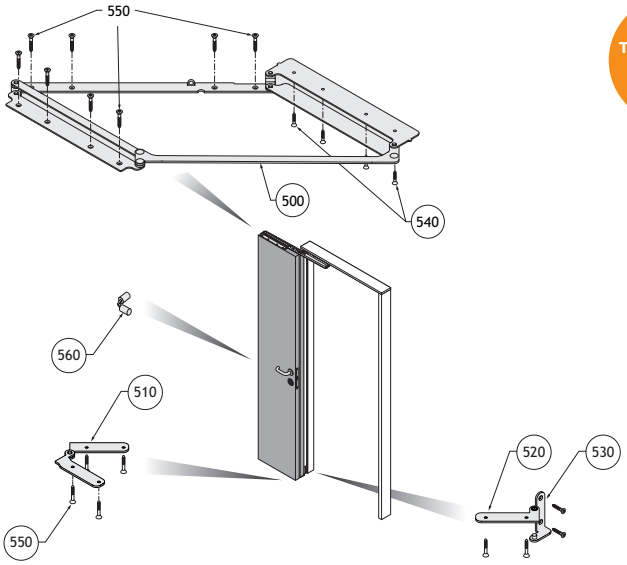
A SYSTEM FOR FOLDING DOORS COMPACK LIVING

COMPACK LIVING

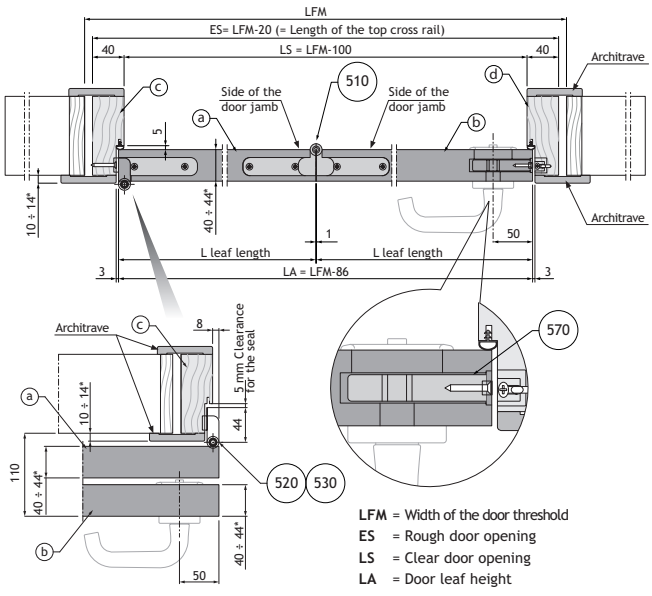
SET WITH A OPENING ANGLE 180°

Code	Description
39515	A system for folding doors Compack LP70 (LFM80) L
39516	A system for folding doors Compack LP70 (LFM80) R
36497	A system for folding doors Compack LP80 (LFM90) L
36498	A system for folding doors Compack LP80 (LFM90) R



COMPONENTS OF A FOLDING SYSTEM

No. of parts	Quantity	Description
500	1	Compack system left or right
510	1	Lower central hinge
520	1	Side lower hinge for leaf left or right
530	1	Lower side hinge for the frame left or righ
540	4	Screw TSP trx ø 4x20
550	16	Screw TSP trx ø 4x30
560	1	Hidden hinge (cut in the middle of the leaf)

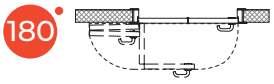


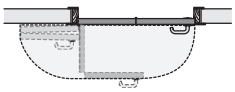
LFM = Width of the door threshold
ES = Rough door opening
LS = Clear door opening
LA = Door leaf height

COMPACK LIVING is a new experience in utilising the usable space of your home. The Compack Living system uses a special hinge that allows the door to fold in a stable and silent manner. Installation of doors using this system does not require additional changes to the walls. The system is easy enough to install without any special carpentry work.

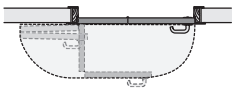
INCREASES THE USABLE SPACE BY 50%

Options for the layout and configuration of the doors with an opening angle of 180 degrees.

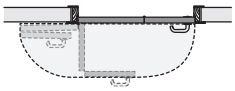




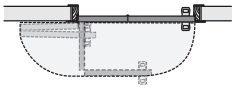
Option 1
Symmetrical door leafs. In this arrangement, a push handle is used on one side and a mortise handle for sliding systems with a knob on the other. Magnetic lock is used.



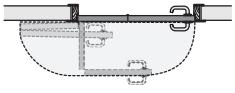
Option 2
Asymmetrical door leafs (leaf with a handle 50 mm larger). In this arrangement, a push handle is used on one side and a mortise handle for sliding systems with a knob is used on the other side. Magnetic lock is used.



Option 3
Asymmetrical door leafs (door leaf with handle 50 mm smaller). In this arrangement, a push handle is used on one side and a mortise handle for sliding systems with a knob on the other. The magnetic lock is used.



Option 4
Asymmetrical door leafs (the leaf with the handle is 100-150 mm larger). In this arrangement, push handles with a short lever or knob handles.



Option 5
Asymmetrical door leafs (the leaf with the handle is 150-200 mm larger). This arrangement uses push handles. A traditional mechanical lock can be used.

HIDDEN SLIDING SYSTEM FOR WOODEN DOORS VILLES 6212/S

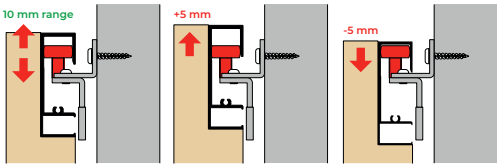
Technical specifications	
Door leaf weight	80 kg
Overall dimensions of the door leaf	618-1200 mm
Door leaf thickness	30-44 mm
Upper carriage height adjustment	+ 4 mm/-4 mm
Lower carriage height adjustment	+ 3 mm/-2 mm
Depth adjustment	+ 3 mm/-3 mm

The hidden sliding system 6212/S with two soft closers is used for installing sliding doors when it is necessary to visually «hide» the track and mounting elements.
A visual advantage of this system is the inclusion of two soft closers in the standard configuration and the ability to combine two systems into one, creating a sliding system for double-leaf doors.

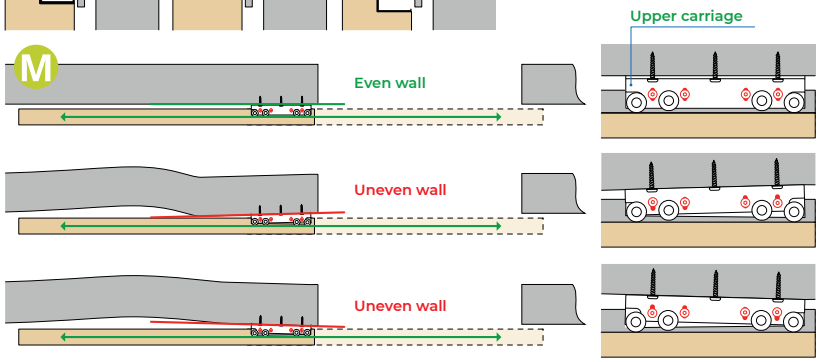
IMPROVEMENTS IN THE NEW VILLES 6212/S SYSTEM

Improvements in the new VILLES 6212/S system.
Enhanced soft closers.
Capability for installation in a door leaf with honeycomb core.
Improved bottom guide (equipped with a roller).

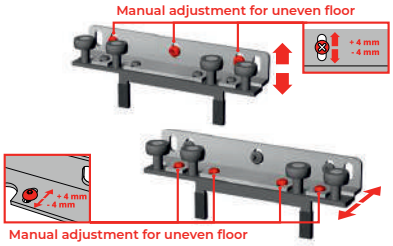
P1 Self-adjustment range of 10 mm



When floor unevenness occurs, the self-adjustment system operates within a range of up to 10 mm

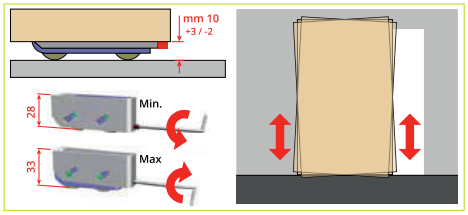


P2 Additional manual adjustment of 10 mm



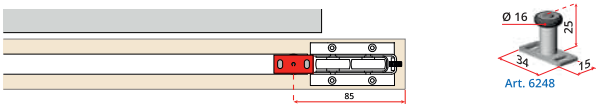
Additional manual adjustment allows for correcting not only floor or wall unevenness but also inaccurately marked or drilled holes in the wall.

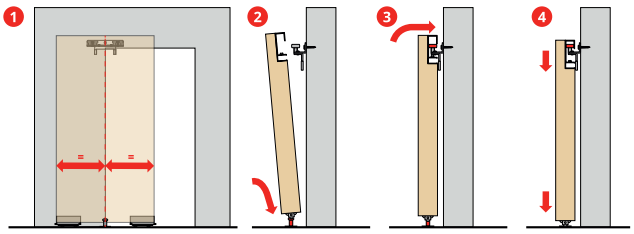
P3 Adjustment of the lower carriages



The lower carriages with rollers are easily adjustable within a wide range, allowing for the correction of diagonal misalignment.

S1 Scheme of door assembly and installation





The main feature of the Villes2000 6212/S concealed system is its flexible adjustment in 3 planes and the ability to handle heavy weight loads. In this sliding system, the load is evenly distributed between the suspension and the four lower support rollers, with the floor free from any track.
Advantages: no bottom track, 4 support rollers, wide adjustment options, reliability, ease of installation, and high quality.
Technical features: the track is installed inside the door leaf, the carriages are made of steel, rollers on ball bearings made of wear-resistant material, and the lower carriages rest on the floor.

Sliding systems in loft style allow for the harmonious installation of heavy vintage doors within an interior. This is a practical and beautiful solution for any interior that highlights the impeccable taste of the owner and their love for exclusive items.

The functionality of LOFT sliding systems lies in the fact that the doors take up less space and visually enlarge the room. The design of such doors allows for the division of space without creating a sense of isolation.

Having a rich history behind them, these stylish and convenient doors have long won the hearts of residents in big cities. The charm of simple lines and the luxurious texture of wood will enhance any interior. Sliding systems in loft style allow for the harmonious installation of heavy vintage doors within an interior. This is a practical and beautiful solution for any interior that emphasizes the impeccable taste of the owner and their love for exclusive items.

MADE IN ITALY

NEW

Buonelle pivot hinges are the epitome of elegance and functionality in the world of door mechanisms. The hydraulic mechanism gives these hinges a special softness, making every opening and closing of the door an invisible and silent ballet. These are not just hinges - they are technological works of art that give the space a sense of lightness and modernity.

AESTHETICS AND SAFETY
The Italian **pivot door hinge** system mechanism is a synthesis of a combination of centre hung hinges and a door closer, completely hidden in the door profile without a rebate. There are no protruding elements. There is a built-in controlled and smooth adjustment of the door closing speed (hydraulic mechanism).

POWER AND DURABILITY
The door weight is applicable in a wide range from 50 to 150 kg. Proven operational reliability up to 1 000 000 door opening and closing cycles.

A DOOR CLOSER MECHANISM FOR INTENSIVE USE WITH A WIDE RANGE OF DOOR CLOSER APPLICATIONS.

The integrated and compact design of the Pivot hinge allows you to keep the exterior design of the door uncluttered.

HYDRAULIC DRIVE OF THE CENTRAL DOOR AXIS
Mod. F305

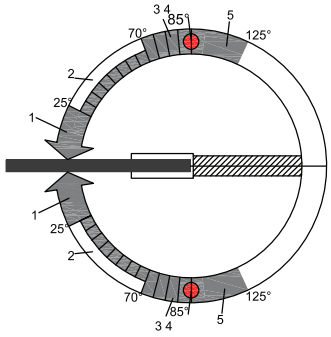
TECHNICAL CHARACTERISTICS

Model	F305.150
Material	45 # steel
Two-sided opening and closing of the door	√
Maximum width of one side - 1.5 m	⩽1250mm
Internal width of the lower frame	10–14mm
Maximum weight of the door	⩽150kg
The maximum opening angle	125°
Fixing the door in the open position by 90°	Optional as desired
Two-stage adjustment of the closing speed	√
Moment of closing the door	EN 4

※ 500000 cycles tested

CENTRAL AXIS OF THE HYDRAULIC DOOR DRIVE

Hydraulics characteristics



1. Closed range: 25°-0° (adjustable by damper screw w 2).
2. Closed range: 70°-25° (adjustable by damper screw w 1).
3. Range of closed doors: 85°-70° (non-adjustable).
4. Positioning angle: 90°.
5. Maximum opening: 125°.
